Medical devices that speak the language of the users.

THORAXSAFE

- Multifunctional thorax belt
- Developed with de-escalation managers, intensive care physicians and physiotherapists
- Prevents falls and thus reduces complications and subsequent costs

- Immobilisation where a patient has a strong urge to move
 - Intensive care while lying in bed (e.g. stabilisation after surgery)
 - Sitting in a transverse bed (e.g. physiotherapy treatments)
 - Sitting in a wheelchair or armchair (e.g. protection against slumping or slipping)

- Softly padded thorax belt
- High wearing comfort

HOW TO SELL

Icebreaker: Questions to ask your customers

- How do you support patients with no pelvic or upper body control?
- What do you do when patients try to get out of bed or wriggle out?
- How do you ensure you prevent falls without permanent supervision?

Target group: This is where the ThoraXsafe is needed

Intensive Care Unit | Neurology | Wards with elderly patients | Nursing homes

Benefits: for clinics and clinic staff

- Nursing staff do not have to stay with patients all of the time – more time for other tasks
- Minimising the risk of injury and the costs of hospital stays
- Safe sitting or lying for neurologically impaired or elderly patients.

ITEM INFORMATION

Description	item number	packaging unit (PU)	note
