Medical devices that speak the language of the users.

SAFEBELT

- Belt system to prevent falls in wheelchairs, body chairs and transport chairs
- Put on while sitting, so lifting patients is not necessary
- Individually adaptable: belt can be adjusted in several places
- Washable belt system in the event of soiling, e.g. by urine, stool or food

- Prevents the upper body from sliding forwards, slipping downwards or tilting forwards
- High level of safety thanks to a combination of Velcro and click system on the belts
- Unintentional opening by patients not possible

- Quick-release fastener using a click system – the product does not require keys or magnets
- Washable

HOW TO SELL

Icebreaker: Questions to ask your customers

- What do you do if patients in wheelchairs or armchairs are sitting in an unstable way or stand up constantly?
- How do you currently lift patients to put on products to prevent falls?
- Do you often need several people to set up safety systems?

Target group: This is where the SafeBelt is needed

Neurology | Wards with elderly or cognitively impaired patients | Nursing | Nursing homes

Benefits: for clinics and clinic staff

- Significant reduction in staff costs
- Safe, stable sitting position – protection against falling out or forwards or slipping down
- Easy, quick and intuitive to put on
