WE THINK DIFFERENTLY.  
WE FIND SOLUTIONS.

Medical devices that speak the language of the users.

# OPFIX

- Two-piece hand and foot fixation with freedom of movement for fingers

- Confident handling of aggressive or restless patients
- Stabilises the joint and thus the position of the limbs where cannulas or drains are placed or life-sustaining technical equipment is positioned
- For situations in which patients have to be repositioned or for example during surgery

- Very soft, high-quality material
- Product variant OPFix Soft with fixed sutured fixation strap (saves time and work steps)

## HOW TO SELL

### Icebreaker: Questions to ask your customers

- How do you deal with patients who display acute aggression or pose a danger to themselves or others?
- What do you do if sedation with medication is not possible or useful?
- What safety solutions are you currently using, and what are their limitations?

### Target group: This is where the OPFix is needed

Intensive Care Unit | Anaesthesia | Surgery

### Benefits: for clinics and clinic staff

- Less work as the system is quick and easy to set up
- Relief for the team in challenging patient situations
